a'
What is claimed is

1. A method of recording information on a
writable optical disc, the steps comprising:
processing a partition area for erasing a partition
5 data written in the partition area;
writing management data including a partition
address in a management area; and
writing information in an information recording
area after management area.

10 2. The method according to claim 1 further
comprising writing a partition data in another partition
area after the information recording area.

3. The method according to claim 1 further
comprising retrieving a partition area, reading the
15 retrieved partition area, determining whether the read
out data is a predetermined partition data, performing
the steps of claim 1 when the predetermined partition
data is read out.

4. A system for recording information on a
20 writable optical disc, comprising:
means for processing a partition area for erasing a
partition data written in the partition area;
means for writing management data including a
partition address in a management area; and
25 means for writing information in an information
recording area after management area.

5. A system for recording information on a
writable optical disc, comprising;

means for retrieving a partition area;
means for reading the retrieved partition area;
means for determining whether the read out data is
a predetermined partition data;
5 means for processing a partition area for erasing a
partition data written in the partition area;
means for writing management data including a
partition address in a management area; and
means for writing information in an information
10 recording area after management area.
